Ideation Phase

Brainstorm & Idea Prioritization Template

Date	08 October 2026
Team ID	9100Fouroars
Project Name	SkillWallet
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. For the SkillWallet project, the team generates ideas for securely managing student skill and institution-related records, controlling access through roles and permissions, and improving the reliability and usability of the system.

Prioritizing volume over value, out-of-the-box ideas are welcome and built upon. The team collaborates to develop practical solutions for secure record access, role-based operations and protection of sensitive SkillWallet information.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Student skill and related institutional records need to be managed in a secure and organized manner. Different users should have different levels of access so that only authorized users can view, create, modify or delete records.

Key points identified by the team:

• Unauthorized users should not be able to access restricted records.

• Access should be controlled according to user roles and permissions.

• Records should be protected from unauthorized modification or deletion.

• Administrators should retain appropriate full-access privileges.

• The system should provide clear and reliable record-level security.

Step-2: Brainstorm, Idea Listing and Grouping

Idea	Category	Purpose
Role-based access control	Security	Give users permissions based on assigned roles.
Script-controlled access	Security	Evaluate conditions before allowing record access.
Read / Create / Write / Delete permissions	Record Management	Control individual operations on records.
Branch/field-based record restriction	Data Security	Allow access only when record conditions are satisfied.
Administrator full access	Administration	Allow administrators to manage records without normal restrictions.
Custom student/skill record table	Data Management	Store structured SkillWallet-related information.
Verification of user permissions	Testing	Check that each role receives only its intended access.

Step-3: Idea Prioritization

Priority	Idea	Reason for Selection	Expected Impact
1	Role-based and script-controlled access	Core requirement for secure SkillWallet records.	High
2	Read / Create / Write / Delete ACLs	Provides operation-level control over records.	High
3	Field/condition-based restrictions	Prevents access to records outside permitted conditions.	High
4	Custom SkillWallet record table	Provides an organized structure for project data.	Medium
5	Permission verification and testing	Ensures implemented access rules work correctly.	Medium

Selected Idea / Final Direction:

Develop SkillWallet as a secure record-management solution using role-based and script-controlled access. The system should enforce different permissions for viewing, creating, editing and deleting records, while using record conditions and user roles to protect sensitive information from unauthorized access.
